

CLAIMS

1. False wall composed of a stretched piece of fabric (3) held around its periphery by an edge (6) that can be
5 attached to ribbands fixed to the ceiling and / or the walls of a room, in which the ribbands comprise a holding arrangement (7) consisting of two parallel flanges (7a, 7b) at a spacing from each other, namely a first outer flange (7a) and a second lower inner flange (7b) that ends in a shoulder
10 (9) that extends towards the first flange (7a) and ends at a distance (g) from it, to enable the edge (6) to pass through, such that it can simply rest on the shoulder (9), characterised in that the ribband is composed of a base (B) and two holding arrangements (7), for which the flanges (7a, 15 7b) are inclined from the base such that the large flanges (7a) converge towards each other and that their ends are separated such that the distance (h) between the end of a large flange (7a) and the plane of the large flange in the opposite holding arrangement is equal to the distance (g)
20 separating the shoulder (9) of the latter holding arrangement from the large flange (7a) associated with it.

2. False wall set forth in claim 1, characterised in that the two holding arrangements (7) are symmetrical about a
25 plane (P) perpendicular to the base (B).

3. False wall set forth in either claim 1 or 2, characterised in that the flanges (7a, 7b) are inclined by about 45° from the base (B).

30

4. False wall set forth in one of the above claims, characterised in that the base (B) is composed of a support plate (5).

5. False wall set forth in claim 4, characterised in that the support plate (5) is provided with attachment elements on its face opposite the holding arrangements.

5

6. False wall set forth in any one of the above claims, characterised in that the bottom (13) of at least one of the large flanges (7a) extends on the opposite side of the holding arrangements (7), by a flange (10) perpendicular to the base 10 (B).

7. False wall set forth in claim 6, characterised in that each large flange (7a) extends on the opposite side of the holding arrangements by a flange (10) perpendicular to the 15 base (B).

8. False wall set forth in claim 7, characterised in that the large flanges (7a) cooperate with a stirrup (12) provided with a tie rod (14) fixed to the ceiling of the room, 20 to hold the ribband.

9. False wall set forth in any one of the above claims, characterised in that the ribband is made in two parts that can be fixed together.

25

10. False wall set forth in claim 9, characterised in that the two parts can be fixed to a plate common to their base.
